

# Erectogenon®

## **DOSAGE FORM AND STRUCTURE:**

Active ingredients: Astragalus membranaceus extract 135.69 mg, Gotu Kola (Centella Asiatica) extract 50 mg, Ginseng root extract 50 mg, Corynanthe yohimbe bark extract 30 mg, zinc sulfate 40 mg, vitamin E 40 mg, ascorbic acid 40 mg, vitamin B5 10 mg, vitamin B6 4 mg, selenium (as part of the Selexen complex) 0.3 mg, vitamin B12 0.01 mg.

**PHARMACOLOGICAL ACTION:** dietary supplement. Not classified as a drug.

## **PHARMACODYNAMICS:**

The components of the complex contribute to: the restoration of a healthy erection; strengthening of sexual desire and prolongation of sexual intercourse; increasing performance, motor activity and reaction, etc.

- Astragalus is an adaptogen that exhibits restorative, immunomodulating and tonic effects on the central nervous system and male potency. It strengthens the function of the sex glands in men, stimulates blood formation and regulates carbohydrate metabolism.
- Yohimbe bark extract enhances erection by increasing blood flow to the cavernous bodies of the penis. At the same time, it has an effect on the cerebral cortex and subcortical centers, thereby removing the feeling of self-doubt, stiffness, and fear. The extract enhances sexual and emotional sensations during intimacy. It promotes restoration of potency in men suffering from sexual dysfunctions, increases working capacity and endurance, improves motor activity and reaction.
- Gotu Kola herb is a powerful natural immunostimulant and sex enhancer. It improves cerebral circulation and oxygen supply to the brain, thereby enhancing mental abilities, memory and potency; it relieves headaches, and has a mild diuretic effect.
- Ginseng root extract improves prostate function and sexual activity, has tonic, restorative and stimulating properties. The active ingredients of Ginseng produce a strong effect on the central nervous system, increase working efficiency and reduce physical and mental fatigue, improve appetite and stimulate sexual function. In addition, Ginseng improves the functional activity of the cardiovascular system and regulates blood pressure.
- Selenium enhances sexual and reproductive function. As part of the complex, it has an organically bound form (selexen), which is an additional advantage. Selexen is able to accumulate in the body and give up selenium only in cases when the body has an urgent need for it: under stress, colds, endogenous or exogenous intoxication, and under severe physical exertion.
- Zinc is an important component in building genetic material. It is necessary for the allocation of reproductive hormones: estrogen and progesterone. This trace element is found in the sperm in highest concentrations, and it determines the quality of sperm. Deficiency of this trace element is associated with the development of prostatitis, adenoma and prostate cancer.
- Vitamin B6 normalizes hormonal balance, improves immunity, restores the functioning of prostate cells, and is used in infections of the urogenital sphere.
- Vitamin B5 plays an important role in the synthesis of hormones, in particular testosterone.
- Vitamin E helps prevent prostatitis and malignant diseases of the prostate gland; it stabilizes and maintains hormonal balance in the body.

- Vitamin B12 is one of the substances necessary for the health of the male reproductive organs, it is able to correct the decrease in the number of spermatozooids in the seminal fluid.
- Vitamin C is necessary for the normal functioning of the genitals. It improves the body resistance to environmental factors.

### **INTENDED USES:**

Erectogenone contributes to:

- Restoration of a healthy erection;
- Strengthening sexual desire (libido);
- Strengthening sexual sensations during intimacy;
- Extending sexual intercourse;
- Improving blood supply to the pelvic organs;
- Increasing the effectiveness of specialized treatment (as part of complex therapy) of any type of erectile dysfunction.

### **CONTRAINDICATIONS:**

- Individual intolerance to components;
- Increased nervous excitability;
- Arterial hypo / hypertension;
- Insomnia;
- Teenagers under 18 years old and men over 70 years old;
- Severe impaired liver and kidney function;
- Cardiac rhythm disorder;
- Atherosclerosis.

The remedy is not recommended for men who have recently had a stroke or a heart attack, or in case there was a recent abdominal surgery (6 months ago).

### **DOSAGE AND ADMINISTRATION:**

Adult men: 1 capsule 1 time a day, in the afternoon during meals. Duration of treatment: 3-4 weeks. The course can be repeated 3-4 times a year.

### **PRECAUTION:**

It is contraindicated to take Erectogenone in parallel with other medicines for potency. In addition, if a patient is taking selective inhibitors and other potent synthetic drugs for erection the treatment with Erectogenone should be abandoned.

### **SIDE EFFECTS:**

Erectogenone can cause unpleasant side effects in case of irrational dosage or intolerance. For example: general uneasiness; nausea; increased body temperature; dizziness and headaches; diarrhea; lack of energy; skin rash; weakened state of the limbs. Practice shows that side effects are manifested in exceptional cases; they do not last long, and do not require symptomatic therapy.

### **OVERDOSE:**

If a patient takes more than one capsule of the biocomplex per day, the following symptoms may be observed: increased drowsiness, sweating, nervousness, aggressiveness, vomiting, nausea, epileptic seizure, convulsive state, etc. All symptoms disappear after discontinuation of the supplement and after gastric lavage and further intake of the activated carbon.

### **INTERACTION WITH OTHER DRUGS:**

Clinical data are unavailable.

**STORAGE CONDITIONS:**

Store in a dry place, at a temperature not exceeding 25°C (77°F). Keep out of the reach of children.

**SHELF LIFE:** 2 years.

**MANUFACTURER:** VIS LLC, Russia
