

## Memoprove® Instruction

<b>Dosage form</b>	pills N-PEP-12™ (Neuro prep powder: lactose monohydrate; a blend of peptides derived from the brain of a pig). <i>Excipients:</i> microcrystalline cellulose, sodium croscarmellose, magnesium stearate, high-dispersible silicon dioxide.
<b>Structure</b>	<i>Coating composition:</i> cellulose acetate phthalate, triethyl citrate, talc, titanium dioxide, microcrystalline wax.
<b>Description</b>	Film-coated tablets weighing 425 mg.
<b>Pharmacological classification</b>	Dietary supplement
<b>ATC code</b>	V06B
<b>Pharmacological action</b>	Neuroprotective

### Pharmacodynamics

Memoprove is a dietary supplement that is beneficial for mild to moderate memory problems.

Memoprove contains the patented peptide blend N-PEP-12™, which helps maintain optimal cognitive function.

Research shows that short-term memory declines with age, starting as early as 25 years old and continuing throughout life.

Signs of memory problems include: difficulty remembering names of people just met; “losing” various items (mobile phone, glasses, keys); trouble remembering to-do lists; difficulty recalling what one intended to do or say; issues with concentration; and challenges in remembering new information or large amounts of information.

It has been reliably proven that Memoprove can:

- Slow down the main processes that cause memory problems;
- Support optimal brain function;
- Stimulate the production of new brain cells (neurogenesis);
- Stimulate the formation of new connections between brain cells (neuroplasticity);
- Protect existing brain cells and their connections (neuroprotection);
- Increase glucose transport and utilization in the brain;
- Enhance the lifespan and energy production of aging brain cells.

Published clinical studies confirm that by the 30th day of using Memoprove, short-term memory improves significantly (by 15% or more using standard memory assessment tests), restoring memory integrity and supporting optimal brain function while increasing its activity.

Memoprove does not contain psycho-stimulants, herbs, yeast, dairy products, artificial colors, sugar, or preservatives.

### Pharmacokinetics

#### Intended uses

As a dietary supplement:

- For mild to moderate memory problems;
- To improve short-term memory;
- To maintain memory in cases of age-related decline;
- To enhance the memorization process;
- To increase concentration, clarity, and mental alertness;
- For absorbing large volumes of information;
- For adults experiencing stress, sleep problems, and work overload.

### Dosage and administration

Take orally with meals.

Adults: 1 tablet once a day. Duration of intake: at least 1 month. If necessary, the intake can be extended until memory and attention improve.

**Side effects**

**Contraindications**

Individual intolerance to the components of the product;  
Lactase deficiency;  
Pregnancy;  
Breastfeeding.

**Special instructions**

Dietary supplement, not a medicinal product.  
It is recommended to consult a doctor before use.

**Storage Conditions**

The product should be stored in a place out of reach of children, at a temperature not exceeding 25°C and relative humidity not exceeding 65%.

**Shelf Life**

3 years. Do not use after the expiration date.
