

Bronchogen® Instruction

Dosage form	capsules Active ingredients: Peptides complex AKS-B containing amino acids: l-glutamic acid, l-aspartic acid, l-alanine, l-leucine.
Structure	Excipients: Microcrystalline cellulose (E460), sugar, lactose, potato starch, tween-80 E433, gelatin, dye E171.
Description	Capsules, 200 mg, 60 pieces in a cardboard package
Pharmacological classification	Biologically active supplement
Pharmacological action	Improving the functioning of the lungs and bronchi

Pharmacology

Bronchogen is a source of peptides that improve the functional state of the bronchopulmonary system.

Clinical studies have shown that the peptides in Bronchogen help reduce the frequency of coughing episodes, relieve bronchospasm, and decrease sputum production.

Intended uses

- Acute and chronic bronchitis
- Chronic bronchitis with an asthmatic component
- Smoker's bronchitis

Recommended for

Prevention of bronchopulmonary diseases, especially for smokers and the elderly.

Contraindications

Individual intolerance to product components, pregnancy, and lactation.

Dosage and Administration

Adults: 1-2 capsules, 1-2 times per day. Duration of intake: 20-30 days. A repeat course is recommended after 4-6 months. The product should be taken with meals.

Storage Conditions

Store in a dry place, protected from light, at a temperature not exceeding 25°C (77°F).

Manufacturer

PeptideBio, Russia

Shelf Life

5 years.
